COURSE DESCRIPT	TION FORM						
CENG491 SYSTEM PROGRAM	IMING (TECH	H.ELECT.)					
7							
/							
Loader, Connector, Micro programming, single and double-pass symbolic converters. Design and implementation of a variety of system software, The relationship between machine architecture and system software, Windows, Unix operating systems, the introduction							
The Linux Programming Interface: A Linux and UNIX System Programming Handbook, Michael Kerrisk, 2010.							
Advanced Programming in the Unix Environment, 3rd Edition, by Richard Stevens and Steven A Rago, Addison-Wesley, 2013 Understanding UNIX/LINUX Programming: A Guide to Theory and Practice, by Bruce Molay, Prentice Hall, 2002.							
6							
There is no prerequisite or co-req	uisite for this o	course.					
Elective							
English							
Providing current knowledge and skills about Iconic programming elements, source and target program, Re-entered program, Re-executed program and addressing techniques.							
 Defines symbolic programming elements Explains the concepts of source and target program, reenterable program, reexecutable program. Applies addressing techniques. 							
The mode of delivery of this course is face to face.							
 Week: Symbolic programming elements Week: Source and object program Week: Re-enter the program Week: Re-enter the program Week: Re-run the program Week: Addressing techniques, the concept of Procedure Week: Parameter communication techniques Week: Operating string-symbolic relationship between the program, the programming techniques Week: Loader, Connector, Micro programming, single and double-pass symbolic converters Week: Design and implementation of a variety of system software Week: The relationship between machine architecture and system software Week: Windows, Unix operating systems, the introduction Week: Assembly languages Week: Machine-dependent assembly, machine independent assembly Week: Program blocks. Assembler design, MASM and SPARC structures. 							
Weekly theoretical course hours: 3 Reading Activities Midterm and revision for midterm Final exam and revision for final exam

Contribution Level between Course Outcomes		No		rogram Çık			1	2	3	4	5	
between Course Outcomes and Program Outcomes		1 Knowledge of ma engineering, comp engineering; ability solving complex of			nd compu this know	iter vledge in					x	
		2 Ability to define, formulate ar complex engineering problem science, mathematics and enging knowledge and considering th Sustainable Development Goa the problems addressed.				lyze g basic ng		x				
		3	Ability to desig complex engin design comple software, algor current and fut realistic constr	lems; abil processes, oducts to nents, cor	lity to devices, meet				x			
		Ability to select, use and develop appropriate techniques, resources and modern engineering and informatics tools, including estimation and modeling, for the analysis and solution of complex engineering problems while being aware of their limitations.				x						
		5	Ability to use a complex engin topics in comp reviewing the experiments, c collecting data results.	research me eering prob uter engine literature, d onducting e	lems or re ering, incl esigning experimen	esearch luding ts,						
	F	6	Knowledge of practices and t									

	7	economy, sustainability and environment within the scope of the UN Sustainable Development Goals; awareness of the consequences of engineering solutions in the fields of information security and law. Acting in accordance with engineering professional principles and knowledge on ethical responsibility; awareness of acting impartially, without discrimination on any		
	8	issue, and being inclusive of diversity. Ability to work effectively individually and as a team member or leader in intradisciplinary and multidisciplinary teams (face-to-face, remote, or hybrid).		
	9	Ability to conduct effective verbal and written communication on technical issues in Turkish or English, prepare reports, make effective presentations and prepare software documentation, considering the various differences of the target audience (such as education, language, profession).		x
	10	Knowledge of business practices such as project, risk and change management and economic feasibility analysis; awareness of entrepreneurship and innovation.		
	11	Lifelong learning skill that includes the ability to learn independently and continuously, to adapt to new and developing scientific practices and technologies, and to think inquisitively about technological changes.
