COURSE DESCRIPTION FORM								
Course Code and Name	CENG471 INTRODUCTION TO IMAGE PROCESSING (TECH.ELECT.)							
Course Semester	7							
Catalogue Data of the Course (Course Content)	Basics of image processing, image sensing and image capturing, image quality enhancing, noise reduction, image blurring and sharpening.							
Course Textbooks	Gonzalez R.C., Woods R.E., Digital Image Processing, 2nd Edition, Prentice Hall 2002.							
Supplementary Textbooks	Szeliski R., Computer Vision: Algorithms and Applications, Springer, 2010							
Credit (ECTS)	6							
Prerequisites for the Course (Attendance Requirements)	-							
Course Type	Elective							
Language of Instruction	English							
Course Objectives	Teaching the basic concepts of image processing, explain the properties of image processing algorithms to be able to solve image processing problems.							
Course Learning Outcomes	Explains the basics of image processing Applies point based image processing operations. Implement spatial domain and frequency domain filters. Implement image restoration techniques. Applies image processing algorithms in real world scenarios							
Instruction Method (Face-to-face, Distance education etc.)	Face-to-face							
Weekly Schedule of the Course	Week 1: Basics of Image Processing Week 2: Image formation, sampling and quantization Week 3: Color perception and color spaces Week 4: Point operations Week 5: Image enhancement techniques Week 6: Spatial filtering Week 7: Image smoothing Week 8: Edge detection and sharpening Week 9: Frequency domain image processing Week 10: Binary image analysis Week 11: Morphological image processing Week 12: Image segmentation Week 13: Deep learning based image processing applications Week 14: Advanced topics and trends in image processing							
Teaching Activities (The time spent for the activities listed here will determine the amount of credit required)	Weekly theoretical course hours: 3 Reading activities Internet search and library work Making a report Preparing and making presentations Midterm and revision for midterm Final exam and revision for final exam							
Assessment Criteria	Midterm exam Assignment Application Project	Number(s) 1	Weight (%) 30 30					
	Practice	1						

	Quiz									
	Final exam 1		40							
	Total 3			100						
	Activity		Number of Weeks	(V	Duration (Weekly Hour)		End of Semester Total Workload			
Workload of the Course	Weekly theoretical course hours		14	3		4	42			
	Weekly pra	ctical course ho	ours							
	Reading activities		14	2		2	28			
	Internet search and library work		14	2		2	28			
	Designing and implementing materials									
	Making a report		1	10		1	10			
	Preparing and making presentations		1	10	10		10			
	Midterm and revision for midterm		1	20	20		20			
	Final exam	and revision fo	r final	1	20)		20		
	exam		1							
	Total work				150					
	Total work						6			
	Course Cre						_	6		
Contribution Level between Course Outcomes	No		Program Ou			1	2	3	4	5
and Program Outcomes				cs, science, bas	ıc					
· g - ·····	1		ring, computing, and computer ring; ability to use this knowledge in		e in				X	
		solving complex engineering problems.								
				ate and analyze						
		complex engineering problems using basic science, mathematics and engineering								
	2	knowledge and considering the UN Sustainable Development Goals relevant to							X	
		the problems addressed.								
		Ability to design creative solutions to								
		complex engineering problems; ability to design complex systems, processes, devices, software, algorithms or products to meet current and future requirements, considering realistic constraints and conditions.								
	3						X			
				ring						
					: 4					
		techniques, re		d develop appropriate nd modern						
		engineering and informatics tools, including		ing				37		
	4		estimation and modeling, for the analysis and						X	
			solution of complex engineering problems while being aware of their limitations.		ıs					
				ethods to exami	ne					
				blems or research						
		topics in computer engineering, including		g						
	5	reviewing the literature, designing						X		
			conducting experiments, ta, analyzing and interpreting							
		results.	u, anaryznik	, and merpreun	5					
		Knowledge of		of engineering						
		practices and the standards used in these practices on society, health and safety, economy, sustainability and environment
