| COURSE DESCRIPTION FORM | | | | | | | |
|--|---|--|--|--|--|--|--|
| Course Code and Name | CENG444 ARTIFICIAL INTELLIGENCE SECURITY (TECH. ELECT.) | | | | | | |
| Course Semester | 8 | | | | | | |
| Catalogue Data of the Course (Course Content) | Types of attacks on artificial intelligence, attacks on classification, threats to model privacy, adversarial example generation techniques, threat modeling and attack simulation, measuring and evaluating attack impact, secure learning, privacy-preserving learning, adversarial training and model ensembles. | | | | | | |
| Course Textbooks | Adversarial Learning and Secure AI by David J. Miller, Zhen Xiang, George Kesidis, Cambridge University Press, 2023. | | | | | | |
| Supplementary Textbooks | Adversarial Machine Learning (1st Edition) by Anthony D. Joseph, Blaine Nelson, Benjamin I. P. Rubinstein, J. D. Tygar, Cambridge University Press, 2019. Adversarial Machine Learning by Yevgeniy Vorobeychik, Murat Kantarcioglu, Springer, 2018. | | | | | | |
| Credit (ECTS) | 6 | | | | | | |
| Prerequisites for the Course (Attendance Requirements) | No prerequisite. %70 attendance is required. | | | | | | |
| Course Type | Technical elective | | | | | | |
| Language of Instruction | English | | | | | | |
| Course Objectives | This course is aimed to introduce the threats to and attacks on the security of an intelligence models, to comparatively explain the methods that can be used to d models resistant to these attacks, and to enable students to develop more artificial intelligence models. | | | | | | |
| Course Learning Outcomes | Students taking this course 1. Understand security problems related to artificial intelligence models, 2. Apply attacks against artificial intelligence models, 3. Analyze the resistance of artificial intelligence models against attacks, 4. Compare approaches to developing artificial intelligence models that are resistant to attacks, 5. Use methods that increase artificial intelligence security. | | | | | | |
| Instruction Method (Face-to-face, Distance education etc.) | Face to face | | | | | | |
| Weekly Schedule of the Course | Week 1: Fundamentals of artificial intelligence Week 2: Fundamentals of cyber security Week 3: Data and database security Week 4: Artificial neural networks Week 5: Deep learning algorithms Week 6: Types of attacks against artificial intelligence Week 7: Attacks on classification – Evasion Week 8: Attacks on classification – Poisoning Week 9: Threats to model privacy Week 10: Adversarial example generation techniques (FGSM, PGD, C&W) Week 11: Threat modeling and attack simulation Week 12: Measuring and evaluating attack impact Week 13: Defense – secure learning and privacy-preserving learning Week 14: Defense – adversarial training and model ensembles | | | | | | |
| Teaching Activities (The time spent for the activities listed here will determine the amount of credit required) | Weekly theoretical course hours: 3 Reading activities Internet search and library work Designing and implementing materials Making a report Preparing and making presentations Midterm and revision for midterm Final exam and revision for final exam | | | | | | |
