Gazi University Distance Education Policy

Gazi University, which is one of the first higher education institutions of the Republic, continues its way without giving up the quality education it offers, breaks new ground in many fields, and has the features and vision of a research university, has adopted the following principles in the field of distance education;

- ✓ To organise and uninterrupted online education and training processes for access to quality and inclusive education, one of the sustainable development goals, and ensuring the continuity of all these processes with a participatory approach, taking into account the opinions of internal and external stakeholders,
- ✓ To organise uninterrupted online education and training processes for access to quality and inclusive education, one of the sustainable development goals, and carrying out all these processes with a participatory approach, taking into account the opinions of internal and external stakeholders,
- ✓ To monitor online education outcomes and achievements with regular performance measurements and ensure continuous improvement,
- ✓ To open the necessary distance education programs in cooperation with academic units and external stakeholders in the areas needed by today's world and prioritizing continuous monitoring and improvements,
- ✓ To ensure the application of student-centred learning methods and approaches specific to distance education and alternative measurement and evaluation forms, which take into account the student's motivation, interests and opportunities, and at this point, increasing the technological and pedagogical competencies of faculty members regarding the processes,
- ✓ To ensure that student guidance, academic counselling, career and social support services are provided completely and uninterruptedly in online environments,
- ✓ To provide the training needed by our University's staff and students in cooperation with internal and external stakeholders, ensuring online access to these trainings without any obstacles, and making the necessary improvements in line with the feedback by focusing on lifelong learning,
- ✓ To carry out Research and Development activities that will make online learning teaching processes more functional and efficient by implementing smart technologies (artificial intelligence, data mining, machine learning, deep learning, learning analytics, etc.) and ensuring traceability of the results,
- ✓ To store information security, confidentiality, and information ethics taking into account the dimensions of information security, and to share this data with relevant stakeholders, taking into account the same principles.
